**Arkansas State University**  
**STEM Center Focus**

The staff with the Rural STEM Education Center provide instructional support for public and private school math, science, and computer science teachers, preservice teachers, school administrators, and out-of-school STEM educators.

This assistance can be in the classroom, during one-on-one and small-group workshops at schools or at A-State, or in the format of large-group presentations. The staff support STEM educators in all areas currently emphasized by state and national STEM education efforts.

For more info on Arkansas State University's STEM Center, click the logo below.
